Attention: Mr. Paul Repasky, Municipal Services Manager

Re: Estimated Costs for Traffic Signal Operations Study  
Otsego County – Gaylord Business Corridor

Dear Mr. Repasky:

This letter is to follow up our recent telephone discussions concerning costs for a traffic signal operations study that would determine optimized signal timing during normal traffic operations and accommodate the unique large fluctuations in traffic flow due to seasonal variations in attractions in the Otsego County and Gaylord area.

Because it is necessary to conduct traffic analyses to determine initial signal cycle lengths, splits, etc., we also recommend that a Traffic Signal Operations Study be performed for the study corridors including all 16 signals. This study will be a full evaluation of the existing system and traffic conditions to determine the appropriate system that is needed and will also determine if any geometric deficiencies exist such as the need for turning lanes, etc., which will improve traffic flow and make the control system more efficient. The estimated cost of the traffic study is \$175,000.

Please let me know if you have any questions concerning this information.

Very truly yours,
